

TERRA PRECIOSA

Care Recommendations:

- ◆ Avoid leaving wet objects on counters for extended periods of time. The sealer has to breathe and moisture could penetrate the topical layer of the sealer
- ◆ Always make sure water doesn't stay trapped under objects that are left on our products, eg/ under flower pots or a soap dispenser
- ◆ Our concrete is resistant to heat, however we recommend it is better to place something under hot pots etc
- ◆ Avoid using knives directly on the surface, it could reduce the durability of the sealer
- ◆ Avoid using any abrasive tools or brushes to clean the concrete, it may cause scratched and premature damage to the sealer
- ◆ Proper backing is necessary during installation to provide proper support to the tiles and prevent cracking
- ◆ Proper sloping is necessary to prevent any water accumulation on the tiles, and allow proper water evacuation
- ◆ Cement is NOT resistant to acid, and any acid or acidic cleaner could damage the surface, sealer or the cement underneath

Maintenance:

- ◆ Countertops can be washed with soap and water
- ◆ Bleach can be used for stubborn stains
- ◆ To restore gloss and hide scratches, beeswax can be applied
- ◆ Never use a pressure washer to wash the tile or any abrasive products or acids
- ◆ A soft PH neutral soap is recommended
- ◆ In high traffic areas, it is recommended to apply a clear topical sealer annually – we suggest PERMA-CRETE AQUA-PEL CLEAR WATER REPELLENT
